PROFILE

AI Engineer with hands-on experience in designing, developing, and deploying Edge AI, Computer Vision, and Generative AI systems. Proven record in building real-time inference pipelines on NVIDIA Jetson platforms, optimizing AI models with TensorRT and INT8 quantization, and integrating multi-camera RTSP streams for video analytics solutions. Skilled in developing face recognition systems, implementing RAG-based AI chatbots, and connecting AI applications with IoT, Embedded Linux, and end-to-end system architectures. Dedicated to building scalable, production-ready AI systems that deliver real-world impact.

PROFESSIONAL EXPERIENCE

Edge AI Engineer & Technical Product Specialist (Full-time, On-site)

Nhat Tien Chung IT Telecoms

May 2025 – Present

Computer Vision & Edge AI Deployment | C++, Python, NVIDIA Jetson, TensorRT, DeepStream, RTSP

- Developed pure C++ real-time inference pipelines on NVIDIA Jetson platforms, optimized with TensorRT for multi-camera RTSP streaming.
- Implemented INT8 quantization on edge devices to reduce inference latency and improve deployment stability.
- Engineered a real-time facial recognition system for high-density identity management, integrating inference results with enterprise HR systems.
- Designed Edge-to-Cloud AI architecture connecting Jetson-based edge devices with centralized NAS/QNAP storage for scalable video analytics.
- Built and deployed 24/7 real-time alerting pipelines using Redis, Webhooks, and Telegram APIs for AI event monitoring.

Generative AI Chatbot | Python, LangChain, HuggingFace, RAG, LLM/VLM

- Designed and implemented an intelligent chatbot using RAG architecture and LLM/VLM models to automate internal data queries.
- Integrated natural language query workflows with operational data sources, reducing manual operations by 50%.

Hardware Evaluation & Technical Documentation | NVIDIA DGX, Jetson, QNAP, Workstations

- Conducted benchmarking and feasibility studies for NVIDIA DGX, Jetson modules, QNAP NAS, servers, and AI workstations.
- Created technical reviews, solution briefs, and product demonstrations to support customer adoption of Edge AI solutions.
- Authored PRDs and technical documentation for Smart Retail, Logistics, and Identity Management projects.

QA/QC & Production Readiness

- Supported QA/QC processes for AI solutions before production deployment.
- Established evaluation standards for model accuracy, system stability, and 24/7 operational reliability.

EDUCATION

Engineer's Degree in Applied Artificial Intelligence of Internet of Things
Industrial University of Ho Chi Minh City

Aug 2021 – Mar 2026

GPA: 6.9

Coursework: Algorithms and Data Structures, Computer Architecture, Discrete Mathematics, Internet of Things: Foundation and Applications, Machine Learning, Mobile Application Development, Network Technology, Programming Languages, Real-Time Operating Systems.

TECHNICAL SKILLS

Languages: Python, C/C++, Dart

AI / Computer Vision: YOLO, Face Recognition, Object Detection, TensorRT, INT8 Quantization, RTSP Streaming, Video Analytics

Generative AI: RAG, LangChain, HuggingFace, LLM/VLM

Edge / Embedded: NVIDIA Jetson, Embedded Linux, Ubuntu, DeepStream, Docker

Backend / Integration: Redis, Firebase, Webhooks, Telegram API, Git

Mobile / UI: Flutter, Android Studio

CERTIFICATES

2025: TOEIC 505

2025: NVIDIA AI Technical Curriculum

2025: Embedded Compute Technical Curriculum

2025: DGX AI Compute Systems Technical Curriculum

2025: Compute Technical Curriculum

2025: Networking Technical Curriculum

2025: DGX Cloud Curriculum
